Update to Asset Valuation Sheet (AVS) Reimbursement Rates

30 June 2026

There's an upcoming update to the AVS reimbursement rates.

Background

The AVS is used as part of the connections process to:

- Calculate reimbursement amounts for network works undertaken by ASPs on behalf of Endeavour Energy
- Determine the value of gifted assets transferred to Endeavour Energy as part of new connections

As part of our ongoing review of processes and pricing, we have recently completed an assessment of AVS reimbursement rates.

What is changing

Following this review, reimbursement rates for selected asset categories will be updated with an average rate increase of 40%, including:

- Transformers
- Switch fuses
- Ducts (materials and installation)

These updates reflect current cost conditions and ensure that reimbursement rates remain appropriate and aligned with the scope of works delivered.

Effective date

The revised AVS rates will apply to:

- All design package submissions submitted from 6 July 2026.

What this means for you

- Updated rates will be incorporated into the AVS tool
- ASPs should use the revised AVS for all applicable projects from the effective date
- No action is required for projects already approved prior to this date

Access to updated AVS

The updated AVS and supporting information available on our [website](#).

Kind regards,

Customer Network Solutions
